ZoomOnImage

(Q) How can I enlarge a picture by moving the mouse above it ?

tags:
[HowTo](#)

(R) Bind 2 different image controls with different sizes to the same database field.

Considering next table:

- Products table

Fields	Field Type	Primary
CategoryID	BigInt	
ProductName	Text	
QuantityPerUnit	Text	
ReorderLevel	Integer	
SupplierID	BigInt	
UnitPrice	Number	
UnitsInStock	Integer	
UnitsOnOrder	Integer	
Discontinued	Boolean	
ProductID	BigInt	Y
Picture	Image	

and a form having a small (for thumbnail display) and a large image control, both bound to the same *Picture* database field ...

Solution based on mouse movements

... use the (small) control's *Mouse inside* and *Mouse outside* events to let appear and disappear the large image.

Link to them next code:

```
Sub ZoomInOut(poEvent As Object)
Dim ofForm As Object, ocZoom As Object
    Set ofForm = Events(poEvent).Source.Parent
    Set ocZoom = ofForm.Controls("imgZoom")
    ocZoom.Visible = Not ocZoom.Visible
End Sub
```

To ensure the right behaviour, we reset the *Visible* property *After each record change*:

```
Sub ZoomInit(poEvent As Object)
Dim ofForm As Object, ocZoom As Object
    Set ofForm = Events(poEvent).Source
    Set ocZoom = ofForm.Controls("imgZoom")
    ocZoom.Visible = False
End Sub
```
